

## COLOUR CODES FOR TRAPEZODIAL RODS

For better orientation in the material quality for trapezoidal threaded rods and screws, Valenta ZT s.r.o. has established the following color codes:

- Steel grade C15 – **no marking**  ---
- Steel grade C45 - **orange**  *RAL 2011*
- Stainless steel AISI304 - **green**  *RAL 6024*
- Stainless steel AISI316 - **red**  *RAL 3000*

The „RAL xxxx“ code specifies an exact color tint.

Color codes apply to regular stock items. For custom manufacturing or special requirements, it is possible to produce rods or spindles without color coding.

**Rods with metric threads are identified by the DIN standard 976 color marking.**
